Agora Whiteboard SDK Release Notes

v1.0

support@agora.io

Introduction

Agora Whiteboard SDK provides a simple collaboration platform on the whiteboard where users from different locations can draw, annotate, and share PDF documents to visualize and simply the communication. The SDK provides open access to the Agora Global Network from any device that supports a standard HTML5-compliant web browser, without requiring any downloads or plugins.

See agora.io for more information.

Downloading the Package

Download the package *Agora_Whiteboard_SDK_v1_0.zip* from http://www.agora.io/developer/.

This package also includes the following documents:
- This release note
- Agora Whiteboard SDK Reference Manual

Use this SDK together with Agora Native SDKs. All SDK packages and documents can be downloaded at www.agora.io/developer/.

New and Changed in v1.0

This is the first release of the whiteboard function.

Known Issues and Limitations

- Users can employ the whiteboard function on Agora-supported platforms for Web, Mac and Windows. On iOS and Android, users have view-only permission.
- If your application is on Mac, the file upload function is not supported. This issue is caused by OS X being unable to open the panel in WKWebView, and the file upload window cannot pop up.
